SUMMARY

Product designer and design-minded engineer who takes features from research and user flows through high-fidelity UI to shipped code. I design intuitive, accessible interfaces in Figma, build and maintain scalable design systems, and prototype quickly — then bridge cleanly into engineering with React, Next.js, and Tailwind.

TECHNICAL SKILLS

Design: Product Design, UX/UI Design, Visual Design, Interaction Design, Wireframing, Prototyping, Design Systems, Design QA & Handoff
Research: User Research, Usability Testing, Journey Mapping, Rapid Iteration
Design Tools: Figma, Webflow, Stitch, Claude Code
Frontend & Prototyping: React (Vite), Next.js, Tailwind CSS, shadcn/ui, HTML/CSS, JavaScript
Engineering: Node.js, Express, Flask, MongoDB, SQL, Firebase, Git
AI / ML: Generative AI (Gemini), Python, applied ML modelling

EDUCATION

Manipal Institute of Technology
B.Tech in Information Technology

Bengaluru, India
2022 – 2026

EXPERIENCE

Product Designer

Apr 2026 – Present

Hoomanlabs

Bengaluru, India

- Led the redesign and migration of the entire product from Mantine to shadcn/ui, modernising the interface and unifying a fragmented UI.
- Built a new company-wide design system and component library from the ground up, establishing consistency and scalability across products.
- Designed and shipped new features end-to-end — from user flows and wireframes to polished, high-fidelity UI.
- Audited and fixed UX issues across the legacy product, improving usability, clarity, and interaction quality.

Product & Visual Designer

Dec 2025 – Mar 2026

Plivo

Bengaluru, India

- Designed and shipped end-to-end flows for 10DLC, Toll-Free, and campaign registration, turning complex compliance requirements into clear, guided user journeys.
- Drove product and visual design across core platform features, translating complex requirements into clean, intuitive interfaces.
- Built and maintained design systems and component libraries, collaborating cross-functionally with engineering and product to ship polished, high-fidelity UI/UX.

Machine Learning Intern

Jun 2025

Shigan Quantum Technologies Ltd.

Gurugram, India

- Built ML models (Regression, K-Means, ANN) for auto-component analytics, achieving 90% accuracy.
- Designed dashboards for lifecycle performance insights, focusing on clear data presentation for non-technical users.

Web Developer

Sep 2024 – Feb 2025

Cinechitra Mediaworks

Bengaluru, India

- Built responsive MERN-stack websites and interfaces optimised for SEO, performance, and usability.
- Translated designs into production front-ends and managed backend architecture end-to-end.

PROJECTS

ProjectMind | *React, FastAPI, Claude API, Supabase*

- Designed and built a full-stack agentic AI product where users chat with an assistant that remembers project context across sessions.
- Owned the conversational UX and information architecture — how memory, project state, and background tasks surface to the user.
- Prototyped and shipped flows for image generation and per-project memory, with clear status feedback (pending / running / completed).

FinFluence | *Flask, yFinance, Tailwind, Firebase, Gemini API*

- Designed a clean, modern interface making real-time financial insights on Indian stocks approachable for everyday users.
- Structured peer comparisons, AI summaries, and actionable trading links into a focused, scannable dashboard.

PDF Highlighter | *Next.js, React, PDF.js*

- Designed and built a PDF viewer with colour-coded highlighting and a smooth annotation experience.
- Improved UI/UX performance with efficient rendering, keeping interaction fast on large documents.
